

Rest Assured Maven Dependencies

A quick reference for the Maven dependencies used in a Rest Assured API automation project.

Dependency Table

Name	Maven Dependency	Short Purpose
Rest Assured	<code>io.rest-assured:rest-assured:5.5.6</code>	Core API testing library. Provides <code>given()</code> , <code>when()</code> , <code>then()</code> , request building, and response validation.
JSON Path	<code>io.rest-assured:json-path:5.5.6</code>	Extracts values from JSON responses, such as <code>data.id</code> or <code>users[0].name</code> .
org.json	<code>org.json:json:20250517</code>	Creates, reads, and manually modifies JSON using <code>JSONObject</code> and <code>JSONArray</code> .
Gson	<code>com.google.code.gson:gson:2.13.1</code>	Converts Java objects to JSON and JSON to Java objects.
TestNG	<code>org.testng:testng:7.11.0</code>	Runs and organizes tests using annotations such as <code>@Test</code> , <code>@BeforeMethod</code> , and <code>@AfterMethod</code> .
ScribeJava APIs	<code>com.github.scribejava:scribejava-apis:8.3.3</code>	Supports OAuth authentication, especially OAuth 1.0 signing and OAuth 2.0 integrations.
JSON Schema Validator	<code>io.rest-assured:json-schema-validator:5.5.6</code>	Validates a complete JSON response against a JSON Schema file.
XML Path	<code>io.rest-assured:xml-path:5.5.6</code>	Extracts values from XML API responses using XML path expressions.
JavaFaker	<code>com.github.javafaker:javafaker:1.0.2</code>	Generates realistic fake test data such as names, emails, addresses, and phone numbers.

Jackson Databind

```
com.fasterxml.jackson.core:jackson-databind:2.20.1
```

Converts Java objects to JSON and JSON to Java objects using `ObjectMapper` .

Easy Memory Trick

- **Rest Assured** = Send requests and validate responses
- **JSON Path** = Find data in JSON
- **org.json** = Build or change JSON manually
- **Gson / Jackson** = Java object ↔ JSON conversion
- **TestNG** = Run tests
- **ScribeJava** = OAuth security
- **JavaFaker** = Generate fake test data

Useful Maven Command

Display direct and transitive dependencies:

Bash

```
mvn dependency:tree
```

Run the tests:

Bash

```
mvn clean test
```
